

Vol. 17(1996), No. 3-4

J. Szargut, J. Skorek, J. Kozioł: Analysis of the evaporation process in the expansion vessel of a GraNo.yd refrigerator

P. Furmański: The interaction of thermal radiation with a porous layer in the presence of fluid flow

M. Banaszekiewicz, D. Kardaś: Two-phase flows in converging-diverging channels - the BNL experiment

A. Ziębik: System analysis in thermal engineering

W. Gajewski: Ecological aspects of energy conversion

W. Nowak: A note on the VI International Symposium Heat Exchange and Renewable Energy Sources

M. E. Poniewski: International Conference on Heat Transfer with Change of Phase *Heat'96*, December 8-10, 1996, Kielce, Poland

A. Rasmus: The XVI Congress of Thermodynamics

Vol. 18(1997), No. 1-2

W. Nowak, W. Szaflik.: Calculations of parallel-flow heat exchangers with linear and non-linear variability of heat capacity

J. Madejski: One-dimensional flashing flow - application to continuous blowdown and emergency overflow from boiler steam drums

J. Wilk: Calculations of thermal power of a high-rotating regenerative heat exchanger

G. Filipczak: Pool boiling heat transfer to tar-oil-water mixtures

N. Al.-Khalidy, J. Skorek: Applying the Kalman filter method for solving inverse thermal problems

T. Chmielniak, W. Wróblewski, S. Dykas: Calculations of water vapour flow with condensation

J. Madejski, W. Wawszczak: High-speed rotating heat exchangers working in countercurrent sets

Vol. 18(1997), No. 3-4

M. Trela: *Stability of a shear driven liquid film on curved surfaces during flow separation*

D. Butrymowicz, M. Trela: *Investigations of heat transfer on a horizontal finned tube fitted with the drainage strip*

P. Wais, K. Rup: *The application of the inverse coefficient problem in heat transfer and fluid flow*

J. Mikieliewicz, D. Mikieliewicz: *Heat transfer of two-phase spray impinging on a hot surface*

T. J. Chmielniak, T. M. Chmielniak: *Power optimization of an engine working in a closed Brayton cycle*

T. Bohdal: *A simplified method for the determination of void fraction during subcooled boiling in channel flow*
