|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----|
| J. STACHARSKA-TARGOSZ and M. CHMIELOWIEC: Application of finite volume method for numerical calculations of the cross flow fan performance curves                                                                                | 3  |
| J. AVSEC, G.F. NATERER and M. MARČIČ: Non-equilibrium statistical mechanics formulation of thermal transport properties for binary and ternary gas mixtures .....                                                                | 21 |
| P. KONIORCZYK and J. ZMYWACZYK: Analysis of thermal conductivity reduction in grey medium using a discrete ordinate method and the Henyey-Greenstein phase function for absorbing, emitting and anisotropically scattering media | 47 |
| J. TERPIŁOWSKI: A pulse method for determination of specific heat and thermal diffusivity of plastics .....                                                                                                                      | 61 |
| D. MIKIELEWICZ and M. KLUGMANN: A study of flow boiling heat transfer in minichannels .....                                                                                                                                      | 73 |
